

Saved Prompt: Daily Stock Update (with Aliases and Latest Balances)

From the uploaded Excel stock file (any date), extract and update the fixed daily stock format below.

Target Output Format:

1. Mochi Durian (box) - 55
2. Nestum Sprinkle (pkt) - 1
3. Cheese Patty (pcs) - 24

...

BIB (ctn)

1. Coke Asli BIB - 4

...

CSD 1.5 (bottle)

1. Coke Asli 1.5 - 138

...

Rules for Matching:

- Match product aliases (e.g. "Mochi Durian" = "D24 DURIAN MOCHI", "Wedges" = "Potato Wedges").
- Use unit conversions only if specified. Example:
 - 1CR = 48PK or 12BT (if in drinks)
 - Use actual unit breakdown from file, never assume 1PK if not stated.
- If item found but total stock = 0 display as `0`.
- If item not found at all also show `0`.
- If multiple units (e.g. 1CR + 3PK) exist combine or convert if needed.

Rules for Summing:

- Group stock balances by product.
- Sum all balances from matching units.
- Respect original unit (pkt, pcs, box, ctn, bt, kg, etc.) in final output.

Source Format:

- Excel stock file contains multi-line per item.
- Fields: Product Code, Product Name, Category, Supplier, Unit, Balance

- Products can appear more than once with different units.
- Only extract balances > 0 unless instructed.

Sectioned Output:

- Frozen / Chiller / Dry Stock
- BIB (ctn)
- CSD 1.5 (bottle)

Reminder:

- Never invent units. Take exactly as written.
- Order and format must match final fixed output.
- This task helps speed up daily manual data entry.
